

ECONOMIC SOLAR HOME LIGHTING SYSTEM

Solectric Solar Home System can generate independent electrical power for use in remote homes, cabins, construction sites and other remote areas without access to the main power line.

The solectric power systems are easy to install with simple "Do it your self" plug-in operation. A basic power controller manages the system making it easy to use. This durable lighting system provides extended lighting hours during the night and also can power radio, TV and other electric appliances.

FEATURE : SLT-HL-120

- Package system includes all necessary parts.
- The power unit are design for easy carrying and ready to use without installation work.
- Solar module and structures are design for easy installation.
- The power unit consists of charge controller, high efficient DC/AC inverter, battery and system operating indicators.
- Photovoltaic power generator utilizes highly efficient and power yield solar cells
